

## **Business Analytics Associate**

**Position Summary:** As a Business Analytics Associate, you will develop, manage and analyze large internal databases to generate insights that will improve performance across all major business units – from sales to finance and operations.

### **Responsibilities**

- Develop data tools to update and track Key Performance Indicators across all business units and functions in real time
- Develop new measurement systems and methodologies to help us better understand our customers, improve customer satisfaction, and develop products that customers want
- Create and constantly refine statistical predictive models for key business outcomes
- Communicate findings internally, working closely with the senior management team

### **Ideal Candidate**

- Very strong quantitative skills; obsessed with data
- Passionate about data visualization; can find ways to communicate a large amount of technical information and data in interesting and exciting ways
- Deep understanding of business concepts within strategy, operations and marketing
- Self-directed, with a tendency toward data-based decision making

### **Technical Skills and Qualifications**

- Bachelors degree in mathematics, economics, computer science, statistics, or related field
- Proficient in Excel and Google Sheets
- Proficiency in the use of other statistical packages (eg: STATA, SPSS, etc.) are an advantage
- At least 1 year of experience in data analysis, monitoring and evaluation, or related field
